

Structures and Unions

```
#include <iostream>
```

```
using namespace std;
```

```
struct Student {
```

```
    int id;
```

```
    float marks;
```

```
};
```

```
union Data {
```

```
    int i;
```

```
    float f;
```

```
};
```

```
int main() {
```

```
    Student s;
```

```
    s.id = 101;
```

```
    s.marks = 85.5;
```

```
    cout << "Structure Data:" << endl;
```

```
    cout << s.id << " " << s.marks << endl;
```

```
    Data d;
```

```
    d.i = 10;
```

```
    cout << "Union Integer: " << d.i << endl;
```

```
    d.f = 3.14;
```

```
    cout << "Union Float: " << d.f << endl;
```

```
    return 0;
```

```
}
```
